

LOUAY BACCARY

Full Stack Engineer | React | NextJs | NodeJs | NestJs | TypeScript

Ariana, Tunisia | +216 23108693 | louay.baccary@gmail.com | linkedin.com/in/louay-baccary | gitlab.com/louayBaccary

Professional Summary

Full Stack Engineer with 6+ years building and deploying end-to-end web applications - from React and Next.js frontends to Node.js and NestJS backends. Delivered 8+ production platforms across 8+ countries handling thousands of daily records with 99.9% uptime. Experienced in REST API, GraphQL, PostgreSQL, Redis, Docker and AWS. Currently expanding into AI Engineering (NVIDIA certification in progress).

Technical Skills

Frontend: React, Next.js, TypeScript, JavaScript, Tailwind CSS, Redux, Zustand, Progressive Web Apps (PWA), Storybook

Backend: Node.js, NestJS, Express.js, REST API, GraphQL, WebSockets, BullMQ, Event-Driven Architecture

Databases: PostgreSQL, MongoDB, Prisma ORM, Drizzle ORM, Redis, SQL

DevOps & Cloud: Docker, AWS EC2, Nginx, PM2, GitLab CI/CD, Linux

Engineering: Jest, Cypress, Playwright, SonarQube, Agile, Scrum, Code Review, Technical Architecture, Mentoring, GitHub, GitLab, Jira

AI : Claude Code (daily production use, hooks, subagents), MCP, OpenAI API, Prompt Engineering

Blockchain & Web3: Solidity, Ethereum, Smart Contracts, IPFS, Zero-Knowledge Proofs (ZKP), Decentralized Identifiers (DIDs)

Languages: Arabic (Native), French (Professional - B2), English (Professional - B2)

Professional Experience

Full Stack Engineer January 2020 – Present

K2LIS | Tunis, Tunisia

- Built 8+ production frontend applications, including admin dashboards, PWAs, and responsive web apps, using React, Next.js, TypeScript, Tailwind CSS, Redux, and Zustand, including owning the end-to-end migration of a production React application to Next.js to improve performance, SEO, and long-term maintainability.
- Designed scalable REST API and GraphQL backends using NestJS and Node.js, with optimized PostgreSQL and MongoDB queries handling thousands of daily records.
- Achieved sub-500ms response times for 90%+ of API requests through Redis caching, rate limiting, and JWT-based authentication and authorization.
- Developed real-time event-driven systems using WebSockets, BullMQ job queues, and webhooks for live updates, scheduled tasks, and third-party integrations, and architected the integration layer powering an AI-driven conversational assistant that delivered context-aware field recommendations and dynamic field generation within a complex form workflow.
- Deployed and maintained production infrastructure on AWS EC2 (Linux instances), with Docker, Nginx, PM2, and GitLab CI/CD pipelines, maintaining 99.9% uptime across all client environments.
- Architected and delivered 4+ production Web3 platforms integrating Ethereum smart contracts, Solidity, Hyperledger, IPFS, and Zero-Knowledge Proofs (ZKP) across Europe, the United States, the Arab region, and West Africa.
- Secured 10,000+ on-chain records using Decentralized Identifiers (DIDs) and IPFS, maintaining sub-500ms response times and zero UX degradation for end users.
- Led architecture decisions, conducted code reviews, and mentored junior developers; collaborated with international stakeholders across 8+ countries in Agile/Scrum environments.

Education

Engineering Degree — Computer Science 2020

ESPRIT — Ecole Supérieure Privée d'Ingénierie et de Technologies | Tunis, Tunisia

Certifications

AI Engineering Professional — NVIDIA-Certified Associate: Generative AI LLMs (NCA-GENL) | *In Progress, 2026*

Hedera Developer Certification — Hedera Hashgraph | 2024

Certified Blockchain Developer — Blockchain Council | 2022
